GIL-BILT CLASSROOM

The lesson board, projected. Every period's slides, goals, bell ringer and agenda in one place a teacher builds once and runs all year, from any device.

WHAT IT IS

Gil-Bilt Classroom is a web board a teacher puts on the smartboard at the start of every class. **The day's agenda, essential question, objectives, slides and handouts are all on it**, set up once and updated in minutes, where every student can read them from any seat.

It was built by a high school science teacher for his own room. The format was developed in a K-5 classroom, where a predictable board made each day legible for the students who needed it most, and it carried straight into high school science.

- Units and lessons across the top, one tap each
- Learning goals students can check off
- Bell Ringer and Exit Slip docs, written on live through Kami
- School calendar on the unit page
- A video library under each lesson, found from the learning goals
- A countdown timer that starts with the Bell Ringer
- Google Slides or PowerPoint on the board's screen
- Essential question and daily agenda
- Assignments as PDFs or Drive files, opened on the board
- A bulletin board with class notebooks: CER, lab notebook
- Learning standards suggested from the goals, posted as small codes

A TEACHER'S FIRST DAY

1. Sign in with a school Google account at gil-bilt.com. A district's colours, school photo and quick links fill in from the staff email address.
2. A short guided tour in Build walks through adding the first unit, a lesson, slides and an assignment.
3. Share a view-only link. Students, families and substitutes see the board without an account, at an address like gil-bilt.com/board/webster-groves.
4. Bookmark the board on the classroom machine. Open it at the bell.

WHAT A PILOT LOOKS LIKE

WHO	One teacher, a department, or several departments at once. Any subject; science is where it started.
HOW LONG	One semester, starting whenever the teachers are ready.
SETUP	One 45-minute session, in person or on a call, run as PD. Teachers leave with a working board.
SUPPORT	Direct email to the developer. Problems pilot teachers find go to the front of the line.
COST	None. No contract, no procurement, nothing to install.
ASKED BACK	Honest feedback at the midpoint and the end, and, if it goes well, permission to name the district as a pilot site.

FOR THE DISTRICT

- ✓ Teacher accounts only. No student accounts and no student data, so no student privacy agreement is needed.
- ✓ Runs in a browser on any smartboard or laptop. Nothing to install or whitelist beyond gil-bilt.com.
- ✓ Files stay in the teacher's Google Drive. The app can see only the files it creates or the teacher picks.
- ✓ Sign-in through Google or email, with the district's own accounts.
- ✓ A board's link drops into Google Classroom or a Canvas module like any other link.
- ✓ No ads, nothing sold, nothing used to train AI.
- ✓ Privacy policy and terms at gil-bilt.com/privacy and gil-bilt.com/terms. A teacher can export or delete everything from their profile page.
